Brother Mobile Solutions Will Highlight Value of PocketJet® Mobile Printers for Home Healthcare & Hospice Agencies at LINK Conference in Chicago, June 3-5

Compact, lightweight and reliable, the full-page thermal printers help ensure compliance with evolving patient care mandates and best practices

BROOMFIELD, Colo.--(BUSINESS WIRE)--Brother Mobile Solutions, Inc. (BMS) a wholly-owned subsidiary of Brother International Corporation and premier provider of mobile and desktop printing solutions, will highlight the PocketJet® mobile printer series at this year's LINK Home Care & Hospice Conference at the Sheraton Chicago, June 3-5.

Compact and lightweight, Brother PocketJet 6 mobile printers are well suited for use by clinicians, nurses, therapists and other health professionals who provide medical care and therapy to patients in home or hospice environments. Using a portable laptop computer, tablet or smartphone in tandem with a mobile printer, these on-the-go professionals can quickly and easily print the clear, full-page documents needed to comply with established and emerging regulations and mandates related to electronic health records (EHR), updated medication lists, and patient care instructions.

David Crist, President of Brother Mobile Solutions, explains: "Compliance has become an urgent issue for home healthcare agencies and businesses. In addition to compliance with current CMS rules and regulations, the proposed new Home Health Agency (HHA) rules specifically 484.60(a)(1) Plan of Care call for home healthcare providers to also provide each patient with an individualized, written Plan of Care detailing the frequency and duration of therapeutic treatments right at the point of care.

"These new mandates, when approved, will further increase the value proposition of point of care printing," Crist continues. "That's why it's so important for leaders in the home care and hospice market to explore the operational advantages of advanced mobile printing, if they have not already done so."

Mobile Printing and Home Healthcare

The LINK Conference connects senior leadership from home healthcare organizations with thought provoking education and the latest from industry-leading and emerging suppliers. Crist will detail how mobile print technology is adding significant value to home care agencies, while improving home health delivery and patient safety.

Used in the field in conjunction with laptop and notebook computers, tablets or smartphones, PocketJet 6 printers provide high-quality, high-speed thermal printing of full-page documents such as: HIPAA releases, physician orders, continuity of care plans and schedules, medication information and instruction sheets, admission forms and much more. Fast, easy and reliable printing at the point of care simplifies compliance, increases mobile field force productivity, and eases the administrative burdens for home care professionals.

Compact, lightweight PocketJet printers fit easily in field bags, backpacks or purses, making them ideal for on-the-move clinicians. They can print up to six pages per minute, generating high-resolution text, graphics and even photos – and thermal technology means no messy inks or toner to replace or dry out. They connect directly to smart devices via USB, Bluetooth or WiFi technology and compatible models are available for iOS, Android and Windows operating systems.
